The role of Cyclope Internet Filtering Proxy

Dan Braux, firm principal, described the role of Cyclope Internet Filtering Proxy to monitor internet usage and block access to a wide range of web content. "It is interesting to see the amount of web sites visited on daily basis from our company. The results of filtering policy are actually visible in a short time. "

"We had a shared internet connection and never had problems with it. But on daily basis the connection seems slower and slower and I have decided to use a filtering tool in order to see the list of visited web sites".

"Considering the positive results of monitoring we have decided to apply filters and reduce the amount of web sites that are not related to our business. The connection is no longer slow and I am convinced that most of the web sites visited are work related."

"Simple solution, low licensing costs and great support is all you can ask for " .
