The role of Cyclope Internet Filtering Proxy

John R. Wiersall, CTO, described the role of Cyclope Internet Filtering Proxy to monitor internet usage and block access to a wide range of web content. "Monitoring large amount of users is a full time job for at least one IT specialist. That is why we have decided to act instead of monitoring. We were recommended Cyclope Internet Filtering Proxy by one of our software providers and the results are positive."

"Considering that in our line of business the list of web sites that our users should visited is a short one we have decided to block access to all web site and to allow just a list that was approved by me. In this way I am sure that users do not spend important time on sport or fun related web sites."

"We download only archives form web site that's why we have decided to block access to executable files and media files. In this way no applications are downloaded and the risks for viruses and spywares are drastically decreased."

"The unlimited license is not expensive at all considering the great job that the product does".
